# WHAT DOES A SYSTEMATIC NATIONAL TESTING PLAN LOOK LIKE?

www.refsa.org

REFSA

1. FREE MASS TESTING

- Implemented by the government across locations to detect active cases

- "Point of interaction" testing e.g. in entrances of factories and office spaces

- Number of daily tests carried out must be correlated with the number of positive cases and positivity rate

REFSA

2. SUBSIDISE RTK & SELF-TEST KITS

Make testing accessible and available to all and encourage regular work-place screening

REFSA

3. DIGITALISE TESTING & CONTACT TRACING

- For preventive testing, use AI-enabled hotspot detecting technology

- For contact tracing, use robust IT infrastructure with near-real-time alerts to citizens. MySejahtera should be equipped with an automated case notification system

REFSA

# 4. MONITOR PATIENTS DURING ISOLATION PHASE

Provide end-to-end support with constant health updates

REFSA

# 5. ENSURE NO-ONE GETS LEFT BEHIND

Outbreak investigations should focus on vulnerable groups and areas with potential super spreaders
